QUANTITY SURVEYING

27 June - 1 July 2016

Effective managers are integral to the success of any business. Improved strategic technical planning will help you to achieve results within your role and to ensure the long term success of your projects.

We know the world is changing. Technology, urbanization, resource scarcity – these are all transforming the way we do business. The industry needs strong management: management which can drive a diverse and innovative profession which is able to offer a coherent and unified response to the challenges ahead. Professionals are also expected to have a much broader knowledge base and be able to work across numerous disciplines within the built environment and property sectors. These courses will enable you to overcome these challenges and, as a result, transform yourself into a more effective and successful leader.

Delivered by:

Step back from day to day work environment for holistic professional development. Invest one week for a management development program - specially created for early & mid-career professionals looking to position themselves as leaders in the industry. These unique programs will help you take an end-to-end view of the property and construction lifecycle combined with managerial skills necessary to succeed.

Introduction

The RICS-CREDAI Management Development Programs (MDP) have been developed in conjunction with the industry and are specifically tailored to meet the needs of those in the built environment sector. The synthesis of technical content with management techniques is at the core of this course, enabling executives to develop the necessary skills by applying them to real life case studies and practical scenarios. Through individual coaching and attendance at a 1-week residential setting, you will gain the skills and knowledge to take the next step as a leader.

Pedagogy

The faculty will use a mix of lectures, cases, role plays and project based exercises to bring out the main themes of the program. Participants will be encouraged to share their experiences and viewpoints to promote learning from each other

5 reasons why you should attend this program

1

Get the perfect mix of technical content with management techniques - specially compiled in this unique program developed by industry leaders like RICS and CREDAI

2

Discover solutions to real work problems, whilst learning best practices through similar real life examples

3

Get access to best industry experts who will be your coach for entire duration of the program

4

Build new network through peer interaction and cross learning

5

Learn how to apply knowledge and skills in real estate business from developer's perspective

“Being the global accrediting body for over 600 built environment university courses; we strongly believe RICS’ programs are unmatched in terms of curriculum and learning outcomes.”

A Balakrishna Hegde
Chairman, Training Committee, CREDAI

“The industry now has easy and economical access to education and training options of the highest standards, which in turn will help the sector become more professional and efficient.”

Sachin Sandhir
Global Managing Director-Emerging Business, RICS

PROGRAMS

Essentials of Construction Project Management

5 day program
20 to 24 June 2016

Program overview

The program provides early to mid-career managers with a broad perspective of the main functional areas of construction project management, real estate development management and commercial management of projects with special emphasis on how to apply the knowledge and skills in real estate business.

It will provide you with the knowledge of key project management techniques as they apply to construction projects. You will explore the project lifecycle from start to finish and the critical steps within each stage, including how to plan, organize and control construction operations; undertaking initial feasibility studies through to design, construction, maintenance, refurbishment and demolition and team working, management and leadership skills.

Who should attend?

Early career and middle level managers in construction project management divisions of real estate development organizations or contracting organizations, consultants and other agencies involved in planning and executing real estate projects.

Participants must have 3 years plus of project management experience in construction in order to derive optimum benefits from the training program.

Learning outcomes

- ▶ Apply effective time and cost control techniques during the design and construction phase of a project
- ▶ Recognise the legal and contractual parameters of a project
- ▶ Implement cost control mechanisms including cash flows within a project
- ▶ Perform risk management and analysis techniques
- ▶ Use the quality and safety principles
- ▶ Apply techniques to manage construction site activity
- ▶ Prepare reports benchmarking progress
- ▶ Prepare audit reports for clients and stakeholders

Essentials of Quantity Surveying

5 day program
27 June to 1 July 2016

Program overview

The program provides early to mid-level managers with a broad perspective of the main functional areas of commercial management of projects with special emphasis on specification, quantities and costing.

It aims to give a perspective of the processes and practices of advanced quantity surveying. Beginning with providing the foundation level knowledge in the principles and practices, this program is delivered using 3 key stages – pre-contract, procurement and post-contract stages and challenges thereof.

Through this interactive course you will broaden your skills in the practice of cost estimating and tendering, procurement methods, risk management and commercial management of construction works.

Who should attend?

Suitable for all construction or quantity surveying professionals, who are looking to develop their key competencies in cost estimating, tendering and procurement techniques and methodologies, having 3 years plus as a quantity surveyor, cost engineer or experience in construction.

Learning outcomes

- ▶ Apply the practices and procedures of international quantity surveying
- ▶ Demonstrate forms of construction for various property types
- ▶ Evaluate the factors which affect the cost of a building
- ▶ Undertake the quantification and costing of construction works
- ▶ Identify the different procurement routes used for construction projects and differentiate between the types of procurement strategies
- ▶ Apply cost planning methods to control the financial aspect of a project
- ▶ Evaluate the sources of cost data relating to a construction
- ▶ Identify the contractual requirements and procedures relevant construction finances
- ▶ Identify the choice of different tendering options and their associated documentation
