**Faculty Feedback:** Few questions came from New Syllabus; General Ability was pretty easy; many question from DSA & CO & TOC qualifying is easy but scoring is tough. Practice previous question papers will be beneficial.
### Q NO. 1
The man who is now Municipal Commissioner worked as ________________.

(A) the security guard at a university
(B) a security guard at the university
(C) a security guard at university
(D) the security guard at the university

**[Ans. B]**
The man who is now municipal commissioner worked as a security guard at the university

### Q NO. 2
Nobody knows how the Indian cricket team is going to cope with the difficult and seamer-friendly wickets in Australia.

Choose the option which is closest in meaning to the underlined phrase in the above sentence.

(A) put up with  (B) put in with  (C) put down to  (D) put up against

**[Ans. A]**
Nobody knows how the Indian cricket team is going to put up with difficult and seamer friendly wickets in Australia
Q NO. 3
Find the odd one in the following group of words.

mock, deride, praise, jeer

(A) mock (B) deride (C) praise (D) jeer

[Ans. C]
Mock, Deride, Jeer all are synonyms

Q NO. 4
Pick the odd one from the following options.

(A) CADBE (B) JHKIL (C) XXYWZ (D) ONPMQ

[Ans. D]
In option A, B, C 2nd letter and 1st letter is 2. In option D it is 1.

Q NO. 5
In a quadratic function, the value of the product of the roots (α, β) is 4. Find the value of

\[ \frac{\alpha^n + \beta^n}{\alpha^{-n} + \beta^{-n}} \]

(A) \(n^4\)  (B) \(4^n\)  (C) \(2^{2n-1}\)  (D) \(4^{n-1}\)

[Ans. B]
Let \(n = 1\), then \(\frac{\alpha^n + \beta^n}{\alpha^{-n} + \beta^{-n}} = \frac{\alpha + \beta}{\frac{1}{\alpha^{n}} + \frac{1}{\beta^{n}}} = \alpha^n \beta^n = 4^n = \alpha \beta = 4\)

\[\because n = 2, \frac{\alpha^2 + \beta^2}{\alpha^{-2} + \beta^{-2}} = \alpha^2 \beta^2 = 4^2\]

\[\therefore n = 3, \frac{\alpha^3 + \beta^3}{\alpha^{-3} + \beta^{-3}} = \alpha^3 \beta^3 = 4^3\]

So, for n, solution is \(4^n\)
Q NO. 6

Q NO. 7
Computers were invented for performing only high-end useful computations. However, it is no understatement that they have taken over our world today. The internet, for example, is ubiquitous. Many believe that the internet itself is an unintended consequence of the original invention. With the advent of mobile computing on our phones, a whole new dimension is now enabled. One is left wondering if all these developments are good or, more importantly, required.

Which of the statement(s) below is/are logically valid and can be inferred from the above paragraph?

(i) The author believes that computers are not good for us.
(ii) Mobile computers and the internet are both intended inventions

(A) (i) only  (B) (ii) only  (C) both (i) and (ii)  (D) neither (i) nor (ii)

[Ans. D]
The first and second sentences tell us that computers are invented for computation and internet for intended invention. These sentences lead to option ii so option (B) is the right inference.

Consider a set \( U \) of 23 different compounds in a Chemistry lab. There is a subset \( S \) of \( U \) of 9 compounds, each of which reacts with exactly 3 compounds of \( U \). Consider the following statements:

I. Each compound in \( U \setminus S \) reacts with an odd number of compounds.

(B) Only II
(C) Only III

[Ans. B]

The value of the expression \( 13^{99} \pmod{17} \), in the range 0 to 16, is ________.

[Ans. *] Range: 4 to 4

By Fermat's theorem, if \( p \) is a prime number and \( p \) is not a divisor of \( a \), then \( a^{p-1} = 1 \pmod{p} \).

Here, 17 is a prime number and 17 is not a divisor of 13.

\[ a^{16} = 1 \pmod{p} \]

\[ 13^{99} = (13)^{96} \cdot (13)^3 = (13^{16})^6 \cdot 2197 = 1^6 \cdot 2197 \pmod{17} \]

A student wrote two context-free grammars $G_1$ and $G_2$ for generating a single C-like array declaration. The dimension of the array is at least one. For example,

```c
int a[10][3];
```

The grammars use $D$ as the start symbol, and use six terminal symbols $\text{int;}$, $\text{id;}$, $[\ ]$ and $\text{num}$. 

**Grammar $G_1$**
- $D \rightarrow \text{int}\ L$
- $L \rightarrow \text{id} \ E$
- $E \rightarrow \text{num}$
- $E \rightarrow [\text{num}] E$
- $E \rightarrow \text{num}$
- $a[10][3]$;

**Grammar $G_2$**
- $D \rightarrow \text{int}\ L$
- $L \rightarrow \text{id} E$
- $E \rightarrow \text{num}$
- $E \rightarrow E[\text{num}]$
- $E \rightarrow [\text{num}]$

Which of the grammars correctly generate the declaration mentioned above?

(A) Both $G_1$ and $G_2$
(B) Only $G_1$
(C) Only $G_2$
(D) Neither $G_1$ nor $G_2$

[Ans. A]

From $G_1$:
- $D \rightarrow \text{int}\ L$
- $\rightarrow \text{id} [E]$
- $\rightarrow \text{a} [\text{num}]$
- $\rightarrow \text{a} [10][3]$;

From $G_2$:
- $D \rightarrow \text{int}\ L$
- $\rightarrow \text{id} E$
- $\rightarrow \text{a} E[\text{num}]$
- $\rightarrow \text{a} [\text{num}][\text{num}]$
- $\rightarrow \text{a} [10][3]$;

$\therefore$ Both $G_1$ & $G_2$ generates the string $\text{int} a[10][3]$;
